

Release Notes for Version 18.2

Released 5 August 2015

The big changes

Applicants Search

Very excited by this one.

You can now use all your candidate search options within your applicant's lists.

This means you can refine your list of applicants based on keywords in their resume, location and lots more.

With one button click, use your Job details as search criteria.

Improved Gun Alert

Use all your new Applicant search options to create your Gun Alert.

Calendar reminders for interviews

Send interview calendar reminders to your applicants and contacts with a click of button.

Moving an Applicant to interview stage activates a pop up.

You enter the time and date and press send.

You can even create your own templates and auto-attach the candidate application and reference checks.

As you're sending these by email, a record of the interview being set is stored in your applicant and contacts notes area.

If you're using the TASKS module a calendar reminder is created for you as well.

Email Forwarder saving SMS

No need to save SMS responses into Perform Zone.

If you're using Perform Zone's SMS facility, they'll get automatically saved into your candidate or contacts notes area.

The Small changes

Different background color for cells that hyperlink

Helps avoid accidentally hyperlinking to pages.

The background of hyperlinked cell will change to blue when you hovering over it.

Cosmetic Changes to Job Skill pop up

Email forwarder defaulted to Opt In for new people

There's an Opt In tick box in the New People pop up that's pre-set to opt in.

This ensures they get included in bulk emails.

The Bug fixes

Date Added for a Cloned job now shows date was cloned.

Used to show the date the original job was added.

Submission date field format font to match rest of application

Name and Address parsing from some all Email Forwarder candidates

Was missing some.

We hope you enjoy Perform Zone 18.2

Kind regards

The Perform Zone Team
